

The Dinosaur Impact Game

Footprint vs. Handshake

You need two players to play this game. Every player receives the same set of dinosaur profiles.

Dino's 1, 2, 3 and 4 try to take action to fight climate change. They all do this in their own way, some paying more attention to their personal carbon footprint, others focusing more on their handshake.

How would you rank these dinosaurs according to the positive climate impact they generate?

Place them in the right order, then discuss your ranking with the other player.

Reflect on your own climate action profile, in which action domain do you want to grow further? Discuss!

How to play

**LEAST POSITIVE
CLIMATE IMPACT**

**MOST POSITIVE
