WE ARE PART OF

OUR OBJECTIVE

With the CO₂ currency ECO emissions will be

- | recorded without gaps
- | transparently mapped
- | fairly accounted

Limit | Ration | Personalize

of climate gas emissions can initiate a socio-ecological transformation in a holistic, equitable yet liberal way.

CO₂-PRICING

SOCIAL | FAIR | TRANSPARENT

CO₂ CURRENCY ECO

ECOLOGICAL BASIC INCOME
+ SEPARATE EMISSIONS PRICE TAG

01

The remaining **total emissions budget** is **cyclically re-determined** based on multinational, scientific calculations, and **equitably distributed to all citizens** in equal amounts as a personal CO₂ budget.

02

The production volumes of fossil primary energy sources are transferred to the supranational climate bank with the **carbon resource currency ECO**. This manages the **private and commercial climate accounts** and pays out a personal CO₂ budget to all citizens each month in the form of the ECO as a **free basic ecological income**.

03

Every citizen receives a **personal climate account** at the climate bank for the recording and accounting of the **individual CO₂ consum.**

04

All products and services receive a separate **emissions price tag** in ECO. It maps the **ecological footprint** and shows the total of all **CO₂ emissions** generated along the **entire value chain**.

05

Private end customers are entitled to **trade the ECO** on the **climate exchange**. Even unused ECO can be sold for money, or additionally required ECO can be purchased. **Purchases and sales** are always a **zero-sum game**, which ensures that the **total emissions budget is not exceeded**.
