

SOLUTIONS EXPLORER – FACTSHEET

The Search-Engine for Climate Action

The Solutions Explorer is the result of 5 years of intensive research and analysis to find products, processes, and services that outperform their peers by protecting the world's resources and, at the same time, staying cost-competitive for both the supply and the demand side. With a network of more than 400 experts and a dedicated Solar Impulse Team, thousands of solutions were identified and assessed in a verified and transparent process. In April 2021, the Foundation labeled its 1000th solution. Taken together, these solutions have the potential to help the world fight climate change while growing our economies.

It took 5 years to
build the database
of **+1300 solutions**

(*October 2021)

Experts have
carried out **4700**
assessments

Solutions come
from **72 different**
countries

90% of the
solutions come
from **start-ups**

Database increases
by **2 solutions a day**

(since April 2021)

> The Foundation created the Solutions Explorer to help solution-seekers and decision-makers navigate our large portfolio. Its user-friendly filtering tool allows searching for solutions based on needs, circumstances or desired outcomes:

- ☐ 9 sectors to define the area of interest
- ☐ +50 profiles to define yourself or your entity
- ☐ 25 different applications to specify your position in the value chain
- ☐ 5 environmental benefits that let you choose the impact area
- ☐ +300 tags to browse

#3d-printing **#solar thermal** #hydrogen
 #concrete #agrivoltaics #demolition waste
 #green waste #corporate #developing countries
